

Avalanche-Energy-Rated N-Channel Power MOSFETs

22 A and 20 A, 275 V and 250 V
 $r_{DS(on)} = 0.14 \Omega$ and 0.17Ω

Features:

- Single pulse avalanche energy rated
- SOA is power-dissipation limited
- Nanosecond switching speeds
- Linear transfer characteristics
- High input impedance
- 275, 250 V dc rated - 120 V ac line system operation

TERMINAL DESIGNATION

JEDEC TO-247

The IRFP254, IRFP255, IRFP256 and IRFP257 are advanced power MOSFETs designed, tested, and guaranteed to withstand a specified level of energy in the breakdown avalanche mode of operation. These are n-channel enhancement-mode silicon-gate power field-effect transistors designed for applications such as switching regulators, switching converters, motor drivers, relay drivers, and drivers for high-power bipolar switching transistors requiring high speed and low gate-drive power. These types can be operated directly from integrated circuits.

The IRFP-types are supplied in the JEDEC TO-247 plastic package.
