## DESCRIPTION

The TURBOSWITCH is a very high performance series of ultra-fast high voltage power diodes from 600 V to 1200 V .
TURBOSWITCH 1200 V drastically cuts losses in all high voltage operations which require extremely fast, soft and noise-free power diodes. Due to their optimized switching performances they also highly decrease power losses in any associated switching IGBT or MOSFET in all "Freewheel

PRELIMINARY DATA

Mode" operations.
They are particularly suitable in Motor Control circuitries, or in the primary of SMPS as snubber, clamping or demagnetizing diodes, and also at the secondary of SMPS as high voltage rectifier diodes.
Packaged in SOD93 and in DOP3I, these 1200V devices are particularly intended for use on 3 phase 400V industrial mains.
